

Speed Camera Data Report.

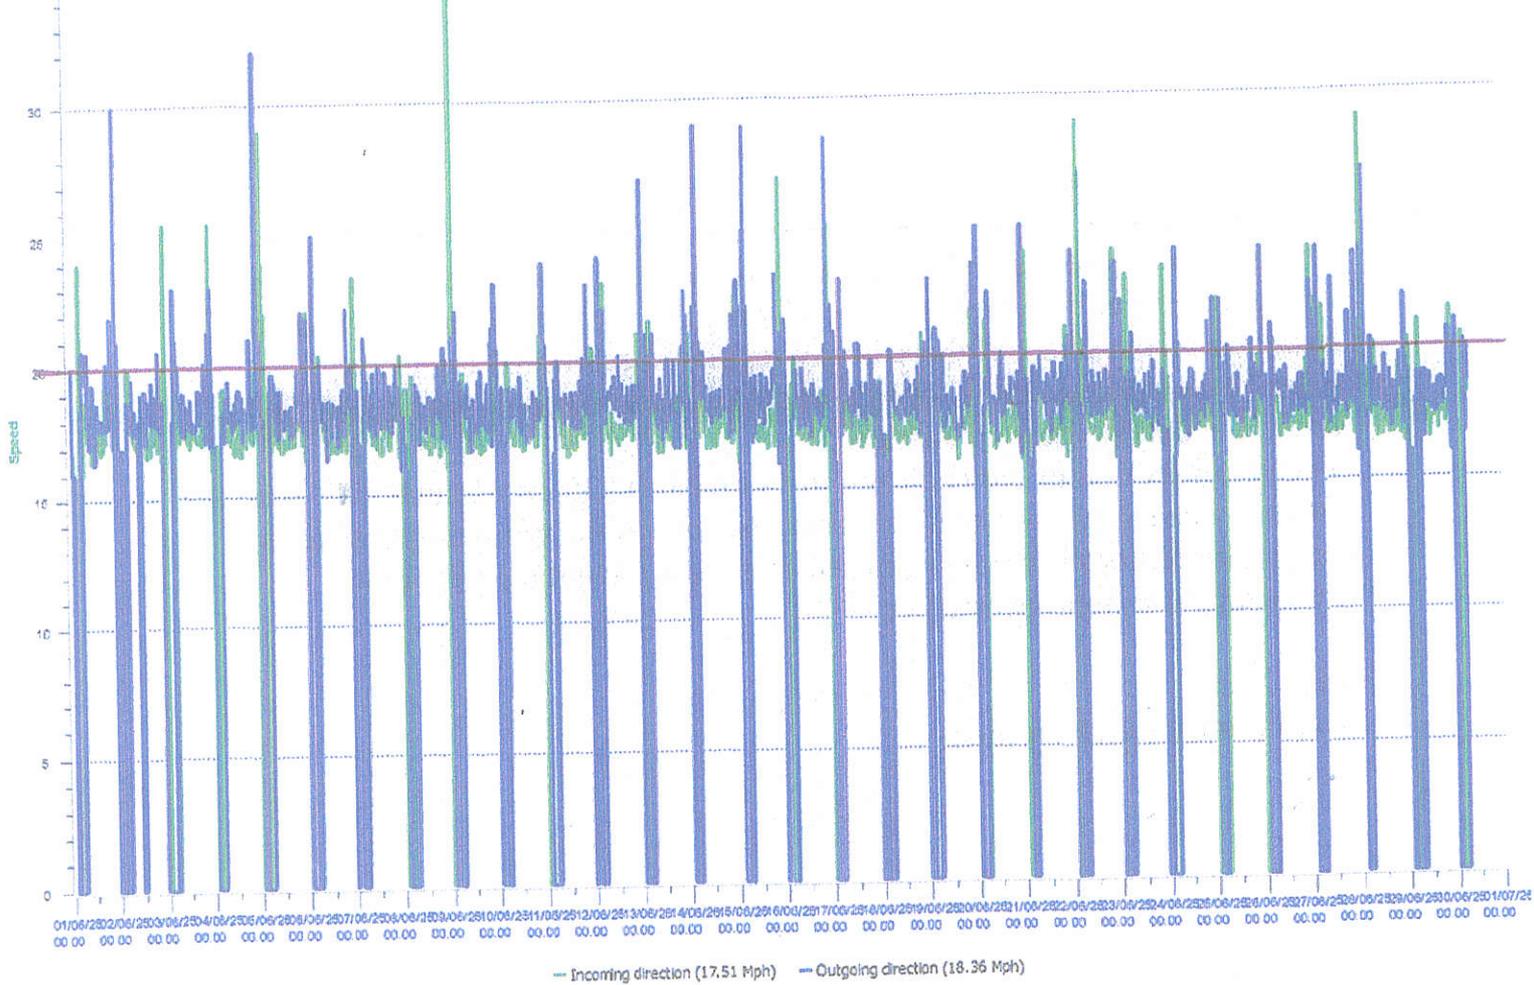

The graphs overleaf show the data from the camera outside the shop. The first graph is for the whole month of June, the second for the last week of June spread out to see if there is any regular speeding taking place.

From the second graph it appears that the times when the speed limit is broken is outside normal daytime.

The small section of data below shows that at 07.30 on Monday 30th June the camera was struck by a vehicle. This has caused the mounting bracket to snap. The camera has now been removed and I await a reply for a replacement mounting bracket.

Ian Creese
Community Road Warden.
